DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a method of correcting for dirt and scratch defects in digital images obtained by scanning cinematographic film classified in class 348, subclass 246.
- II. Claims 15-19, drawn to a method of correcting for flicker in digital images obtained by scanning cinematographic film, classified in class 348, subclass 910.

The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as the scanning method of correcting for dirt and scratch defect can operate without the method of correcting for flicker in digital images obtained by scanning cinematographic film. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
